

BEFORE YOU OPEN THE CHATBOT

AI or teacher? Three questions decide.

1 · Does it touch a student's identity?

A name, a diagnosis, a family situation, a story only one child fits

STOP — that stays out of public AI tools, always. De-identify it or keep it in your own docs.

2 · Is it a judgment about a child?

Grades, IEP decisions, discipline, who needs what

YOURS — AI can format your thinking, but the professional judgment was never a typing problem.

3 · Is it a drafting or formatting task?

First drafts, leveling a text, question banks, rubrics, letters home

DELEGATE THE DRAFT — then edit like the professional you are. Nothing goes out unread.

AI drafts. You decide.

Every yes to question 3 is an evening hour back — as long as questions 1 and 2 stay a no.

THE BACK OF THE POSTER: LISTS YOU CAN ACT ON

Delegate the draft, keep the judgment

The fastest teachers with AI aren't the ones using it for everything — they're the ones who decided *once* what it's for. Post the three questions; when a task passes, here's what delegating actually looks like.

Delegate the first draft

- Letters and newsletters home
- Leveling a passage up or down
- Question banks, exit tickets, diagnostics
- Rubrics a student can self-assess with
- Sub plans and activity directions
- Three versions of one task (scaffold / on-level / extension)
- Icebreakers, brain breaks, station directions
- Making your syllabus student-friendly

Never delegate

- Anything with a student's name or story in it
- Grades, feedback presented as yours but unread
- IEP, 504, or placement decisions
- Discipline calls and parent phone conversations
- Seating charts and "who needs what" choices
- What's worth teaching — the curriculum is a promise you make, not a prompt

What "delegate" means (and doesn't)

Delegating a draft means the AI produces the **first version** and you produce the final one. You'll keep maybe seventy percent, rewrite the rest in your voice, and catch the one thing that's wrong — still faster than a blank page. What it never means: sending an unread draft to a student or family. The read-through is non-negotiable.

The two rules that make every "yes" safe

RULE ONE

Never put student personally identifiable information into a public AI tool.

Describe the need, not the child.

Rule two: a human reviews everything before it reaches a student or family. AI is the intern; you're the teacher of record.

Bring this to a staff meeting: our complete AI Foundations & Safety PD session — script, editable slides, and hands-on labs — turns these posters into a whole-staff norm. In our TpT store.
