TRACK A · AI FOUNDATIONS · KIT 6 OF 20

AI for Communication: Parent Messages and Tone

The message before the message. Word-for-Word Facilitator Script: read it aloud exactly as written, or make it your own. Keyed to all 32 slides, with stage directions, a running clock, and answers to the questions staff actually ask.

Facilitator Script · 45–60 minutes

Built by Adam & Katelyn Spinozzi

A husband-and-wife team of certified educators with over 20 combined years in the classroom. Adam is a certified CTE Carpentry teacher; Katelyn is a certified K-8 teacher.

How to use this script

Everything in plain type is meant to be spoken aloud. Read it verbatim (it's written for the ear) or glance and paraphrase once you're comfortable. Either way delivers a complete session. Slide cues, stage directions, and the running clock work exactly as they did in Kits 1 through 5. Run Kits 1 and 2 before this one: today leans on Kit 1's privacy rule and Kit 2's four-part prompt formula.

One thing about this session is different, and it starts at 0:01. The room does something before you teach anything. Slide 2 is a silent personal audit, and your job on that slide is to stop talking and let it be quiet. Presenters who fill that silence lose the whole opening. Practice waiting.

Meet Ms. Rivera. Throughout the deck you'll see the same example teacher's screen: Ms. Rivera, our running composite (not a real person; she appears in every kit). Today you follow one routine of hers all the way through: her Friday ten minutes, four families, start to finish. When her screen is up, point the room at it; it's the model to mimic in the lab. If someone asks who she is, say exactly that: a fictional teacher we use across the series so you always see what the work looks like before you try it yourself. Her tracker chip sits top-right on every slide; the matching line under each slide cue below tells you what it says, so you always know what the room is reading. Every family and student name in this kit is invented.

THE STANCE OF THIS WHOLE SESSION

AI handles the ordinary contact. You still write the hard message.
AI drafts, the teacher decides.

Timing checkpoints

Clock	You should be...	If behind...
0:04	Coming out of the silent audit (slide 3)	Never shorten the audit; shorten your own setup
0:14	On generic versus specific (slide 8)	Trim the study discussion on slide 4
0:30	Starting the lab (slide 15)	Start it anyway; the lab is the session
0:50	Out of the lab, into share-out (slide 26)	Take one voice instead of three
0:56	On First 48 Hours (slide 30)	Hold the closing lines; hand sheets out at the door

45-minute version: keep the audit at full length, shorten your debrief on slide 3, fold slide 9 into your talk on slide 8, give lab step 1 two minutes instead of three, take one share-out voice instead of three, and read the "45-min cut" stage notes where they appear. Two things are never cut: the lab, and slides 12 and 13.

From the founders

→ This note is from Adam and Katelyn Spinozzi, the two certified teachers who wrote this kit. It's here to give you their perspective before you present. Sharing it is entirely your call: read parts aloud where they fit, retell them in your own words, or keep it to yourself as background. The session is complete either way.

We're Adam and Katelyn, and here is why this session matters for what happens in your classrooms: family communication is where trust is built or lost, and it lives almost entirely in teachers' unpaid margins. The research is blunt about the stakes: even one personal sentence home per week measurably changes what happens for kids. But the messages that matter most are the ones teachers have the least time to write, and the ones that go out tired, rushed, or angry are the ones that cost the most. AI can buy that time back, on one condition: the voice that comes through it stays yours.

The lessons we believe this hour will leave with your staff: how to draft family messages in minutes instead of evenings and still sound like themselves; how to make the positive note home a weekly habit instead of a good intention; how to write in plain language so every family can actually use the message; how to repair the tone of a hard message before it costs a relationship; and the line that keeps all of it human, that hard news is delivered by a person, by voice, every time. Trust is built one reviewed, personal message at a time. This hour buys the time; the trust stays yours to earn.

Segment 1 · The last-contact test (slides 1–3) · 0:00–0:06

SLIDE 1 Title

0:00

→ Slide 1 up as people arrive. Start on time. Do not preview the session yet; the audit comes first.

Welcome back. Before I tell you anything about this hour, I want sixty seconds of your time and I want it quiet. Next slide.

SLIDE 2 The last-contact test

0:01

MS. RIVERA'S SCREEN · SO FAR Her audit: she picked Jalen. Last contact home was a phone call about a shove, nine days ago.

→ Read the three lines on the slide slowly. Then stop talking and start your watch. Sixty seconds. Do not fill the silence, do not pace, do not add a joke. From the front of a room this feels like four minutes. Let it run.

Pick one student. Not your favorite. Ideally one you find difficult, the one whose name makes your shoulders go up a little. Hold that kid in your head. Now the question: when did that family last hear from you when nothing was wrong? Not a grade in the portal. Not a mass email. You, about their kid, with no problem attached. Don't write anything down. Don't say it out loud. Just find the date.

→ Sixty seconds of silence. When it ends, do not ask anyone to share. Go straight to slide 3.

SLIDE 3 The asymmetry

0:04

MS. RIVERA'S SCREEN · SO FAR Her asymmetry: four families, and the only voice they know from her is a problem.

I'm not going to ask what you found. Most rooms find one of three things: conferences, a long time ago, or never. And nobody in here is a bad teacher. That's the whole point of doing it silently. Here's the thing the exercise is actually about. Look at what that family has heard from you this year: the missing-assignment email, the behavior call, the progress alert. Every one of those was necessary and every one of those was accurate. And on the other side of the ledger, when nothing was wrong, there's a blank. So when your name shows up in that inbox, it means something is wrong, because it always has. That's an accusation before you've written a word. And the hard conversation you eventually have to have, the one that really matters, starts from a deficit you built without meaning to.

→ *Let that sit for one beat. Do not apologize for it or soften it. Then move.*

Segment 2 · Why this is not soft (slides 4–7) · 0:06–0:14
SLIDE 4 Kraft & Rogers, and its scope

0:06

MS. RIVERA'S SCREEN · SO FAR Her question about the study: does one sentence a week really do that?

Now the part that makes this a professional practice and not a nice idea. Kraft and Rogers, 2015, a field experiment. Teachers sent short individualized messages home to families every week. The share of students who failed to earn the course credit fell from 15.8 percent to 9.3 percent. That's a 41 percent reduction, from messages home.

And now the scope, which travels with that number every single time you say it, including in the hallway afterward. This ran in a summer credit-recovery program, so these were students retaking a course they had already failed. That is not your average Tuesday. And the study tested a bundle: the messages were individualized, they were weekly, and they were framed around what the student could improve. All three moved together. So we do not get to stand up and say personalization is the mechanism. We don't know that. What we know is that the bundle worked, and that all three ingredients are cheap.

→ *If you say that number without the scope, somebody in your building will repeat it to a board member without the scope. Say both halves, every time. 45-min cut: keep both cards, drop your own commentary.*

SLIDE 5 Why it doesn't happen

0:09

MS. RIVERA'S SCREEN · SO FAR Her time math: 54 hours a week, and the positive note is the first thing cut.

So why isn't everyone doing it? Merrimack and the EdWeek Research Center asked teachers to account for their week: about 54 hours, of which about 25 is actual teaching time. Communicating with families is one of eleven categories competing for the other 29 hours, alongside grading, planning, committees, and everything else. And here's what you already know from living it: when the week gets tight, the routine positive note is the first thing that gets cut. It has no deadline and nobody notices it missing. The problem-solving contact survives, because a problem forces it.

That's the diagnosis, and it's important: this is a capacity problem, not a caring problem. Nobody in this room stopped caring. And capacity happens to be the one thing a tool can actually touch. For context on the size of that: in the Gallup and Walton survey, teachers who use AI weekly reported saving an estimated 5.9 hours a week. That's a self-estimate, not a measured number, and I'd rather you hear it that way than oversell it.

SLIDE 6 The thesis

0:11

MS. RIVERA'S SCREEN · SO FAR Her stance: the tool takes the volume. She writes the hard message.

Here's the whole session in two sentences, and they're on the screen. AI handles the ordinary positive contact, at a volume nobody sustains by hand. You still write the hard message. That's it. And I want to be honest about how unusual that is, because most of what you'll see marketed to teachers this year does the opposite: it offers to write the difficult parent email for you. We are deliberately not doing that, and by the end of the hour you'll know exactly why. The tool takes the volume. The judgment, the specifics, and the hard conversation stay with the professional.

SLIDE 7 Agenda + one promise

0:12

MS. RIVERA'S SCREEN · SO FAR Her promise for the hour: four notes sent, one hard message written.

The hour: twelve minutes on the two kinds of message and how each one gets written, three minutes on the lines that never move, and then twenty minutes of lab where you do it. The promise is not that you'll learn about family communication. It's that you leave with four notes written to four real families on your roster, ready to send, each one carrying something true that you noticed this week. And one hard message drafted, in your words. Four and one. That's the hour.

Segment 3 · The two kinds of message (slides 8–11) · 0:14–0:25

SLIDE 8 Generic versus specific

0:14

MS. RIVERA'S SCREEN · SO FAR Her test: swap the names. If nobody could tell, the note is not worth sending.

Two sentences on the screen. Read them both. "Maya is doing well and it's a pleasure to have her in class." Versus: "Maya found the mistake in my worked example on Tuesday and said so in front of everyone."

The first one is warm, correct, professional, and worth almost nothing, because it could be about anybody. A family reads it and knows they got the form. The second one can only be about Maya, and it proves something no adjective can prove: somebody was looking at her kid on Tuesday. Here's the test I want you to keep. Swap the name. If the note still works with a different child's name in it, it isn't a note yet.

And notice which of those two sentences a tool can write. It can write the first one all day. It cannot write the second one, and it never will, because it wasn't in the room on Tuesday. That's not a limitation we're apologizing for. That's the division of labor for this whole session: the tool builds the shape, you supply the sentence that couldn't have come from anywhere else.

SLIDE 9 Where the one true detail comes from

0:17

MS. RIVERA'S SCREEN · SO FAR Her source for details: her own week, not her memory of the whole year.

→ *This is the slide people are most likely to think they don't need. They do. Lab step 3 is this slide, live, and it's the step that stalls if you skip this. 45-min cut: fold this into slide 8 and keep the four examples.*

"I don't have a specific detail for every kid" is the honest objection, and it's usually wrong in one specific way: people go looking in their memory of the whole year, which is a blur. Look at this week instead. Four days. What you're looking for is small: a moment, a sentence, a choice. Not an achievement. Read the four on the screen. Redid the graph nobody asked her to redo. Read his paragraph out loud for the first time all year. Set up the lab station before anyone asked. Found my mistake and said so.

None of those are awards. Two of them aren't even academic. What they have in common is that they're true, they're dated, and they're specific enough that the family can picture it. And if you genuinely have nothing for a kid this week, that's information too, and it's usually about which kids you're watching.

SLIDE 10 The hard message, which you write

0:20

MS. RIVERA'S SCREEN · SO FAR Her hard-message rule: the fact first, one ask, nothing she cannot deliver.

Other half of the job. The hard message: the missing work, the behavior, the grade that's about to become a problem. You write this one. Not because a tool couldn't produce something that reads well, but because a message that carries consequences has to be defensible by the person who sent it, and because your relationship with that family is the thing doing the work, not the prose. Four rules, and they're all on the slide.

One: lead with the fact, not the feeling. "Devon has not turned in three of the last four assignments" opens a conversation. "I'm concerned about Devon's effort" opens an argument, because effort is an opinion and the family gets to have a different one. Two: make one ask. Not four. One thing you want this family to do, stated plainly, with a date. Three: promise nothing you cannot deliver. If you don't know whether he can catch up, say you don't know. A promise you break in a hard message is worse than the hard message. Four: know when to stop typing. If you're on the third paragraph, or you're explaining your own feelings, or you've written it angry, that's a phone call. And anything written angry waits until morning unless a safety issue can't wait.

SLIDE 11 AI's one job on the hard message

0:23

MS. RIVERA'S SCREEN · SO FAR Her one job for the tool: read it back for tone. Never write the words.

There is exactly one thing I'll let the tool do on a hard message, and it's on the screen. A second read for tone. You write the message. Then you paste it in and ask a narrow question: does any sentence in here read as blame, sarcasm, or a promise I didn't mean to make. Quote the sentence, name the problem, stop. And look at the last line of that prompt, because it's doing the real work: no replacement wording. You are not asking for a rewrite. You're asking for a mirror at nine at night when you've read your own sentence eleven times and can't hear it anymore.

If you take one line from this hour into your practice, take this one: the tool reads it back. You write it. And yes, that also means stripping names before it goes in, which is Kit 1's rule and we'll come back to it in two slides.

Segment 4 · The lines that hold (slides 12–14) · 0:25–0:30

SLIDE 12 The red line

0:25

MS. RIVERA'S SCREEN · SO FAR Her red line: no public AI translation of a family message. She cannot review what she cannot read.

→ *Never cut this slide. Hold the line warmly and immovably; the room will push on efficiency here.*

Two things on this slide and they are not the same thing, so I'm going to keep them apart on purpose. First, our rule, and it's ours: teachers do not run family messages through a public AI translator. The reason is one sentence long. You cannot review what you cannot read. Every other habit in this kit depends on you checking the draft before it goes out, and in a language you don't read, that check is impossible. So official and legal documents travel your district's translation channels, which is the district's obligation and the district's resource.

Second, the law, which is a separate thing. The 2015 Dear Colleague Letter from the Departments of Education and Justice requires schools to communicate meaningfully with limited-English-proficient parents, and it says machine translation of essential information needs qualified human review. Note what that letter does not say. It does not itself forbid a teacher from using AI translation. Our classroom rule is stricter than the letter, and it's stricter because we chose it. I'd rather you hear it that way than repeat a legal claim that isn't in the document.

SLIDE 13 The human-only list

0:27

MS. RIVERA'S SCREEN · SO FAR Her human-only list: safety, discipline, grief, special-education news. She calls.

→ *Never cut this slide either. Read the four items slowly, one at a time.*

Four things get a voice, not a message. Safety. Serious discipline. A family's grief. Special-education news. For these you call, in your own voice, and the written follow-up comes afterward and comes from you. This isn't a policy about AI. It's older than AI. It's just that the cost of drafting dropped, so the temptation to type instead of call went up, and I want the line said out loud in a room before anyone is tired enough to cross it at eleven at night.

SLIDE 14 The privacy rule, applied to families

0:29

MS. RIVERA'S SCREEN · SO FAR Her privacy rule, unchanged: the situation goes in the tool, never the child.

Kit 1's one hard rule, wearing today's clothes. The situation goes into the tool; the child never does. That means no student names in the prompt, no family names, and please do not paste a parent's email in to get help replying, because that email is full of identity. Describe it instead: a family frustrated about a grade. The draft comes back generic, which is fine, because the specifics get added by you in your own inbox where they belong. Same rule as always: the tool gets the shape, you keep the people.

Segment 5 · The lab: Ms. Rivera's Friday ten minutes (slides 15–25) · 0:30–0:50

SLIDE 15 Lab setup

0:30

MS. RIVERA'S SCREEN · SO FAR Her lab artifact: Friday, 3:00, ten minutes, four families.

→ Pairs, devices out inside two minutes, announce which tool you're using. Read the three ground rules off the slide.

Twenty minutes, four steps, and at the end you're holding four notes and one hard message. You'll see the whole thing modeled by Ms. Rivera as we go: one routine, her Friday ten minutes, followed all the way through to the four notes her families actually opened. If you get lost at any step, her screen is the answer key. Copy her structure and you'll finish. Ground rules: no student names into the tool, the specific detail is written by you and not by the tool, and the hard message in step 4 is yours from the first word.

SLIDE 16 Lab step 1 · name four families

0:32

MS. RIVERA'S SCREEN · SO FAR Her Friday list: Maya, Devon, Priya, Jalen. Three unheard from since October conferences.

→ Three minutes. Circulate. If someone is stuck on who to pick, ask "who did you think about in the silence at the start?" That's usually the first name on their list.

Step one, three minutes, and it's the step people rush. Four families who have not heard from you when nothing was wrong. Initials on your handout, not full names. And put the student from the audit on the list, the difficult one. That kid's family is the one where this matters most and it's the one you'll be tempted to leave off.

Ms. Rivera's list is on the right and it's a real Friday. Maya, Devon, Priya: nothing since October conferences. Jalen: nine days ago, a phone call about a shove in the hallway. That's the entire relationship his family has with her voice right now. Four families, three of them silent since October, and this is a teacher who is good at her job.

SLIDE 17 Lab step 2 · draft the shape

0:35

MS. RIVERA'S SCREEN · SO FAR Her Friday prompt: four short notes, and a blank line she fills herself.

→ Four minutes. The prompt is on the handout, copy-ready. Show slide 18 while they type, then slide 19 while they read what came back.

Step two, four minutes. Draft the shape. The prompt is on your handout word for word, so nobody has to invent it: role, task, context, format, exactly the Kit 2 formula. What you're asking for is four short notes with nothing wrong in them, in plain language, and one blank line in each where you'll write the specific thing. You are deliberately asking the tool for the part it's good at and telling it to leave the part it can't do.

SLIDE 18 The prompt she types

0:36

→ Her full chat window is the content here, so the tracker chip steps aside for this slide and the next.

This is Ms. Rivera's screen, and it's the shape to mimic. Role in teal: a teacher's writing assistant. Task in navy: four short notes, one per student. Context in amber, and this is the part people skip: nothing is wrong, these are sixth graders, and these families mostly hear from school only when there's a problem. Format in green: under 70 words, no exclamation marks, no praise adjectives, and leave me a blank line in each note for the one true thing I saw this week. Read that last clause again. She is instructing the tool to leave a hole in its own work. That's not a workaround. That's the design.

SLIDE 19 What came back

0:38

And here's what came back, word for word, all four. Read them. Warm, competent, correctly formatted, and completely interchangeable. Swap Maya's name for Priya's and nothing breaks. That's beige, and I want to be careful about how we judge it, because this is not the tool failing. This is the tool doing exactly what it can do, which is the shape. Every one of those four notes is a serviceable container. And every one has an empty line in the middle of it, because the thing that makes a note worth opening is not in there and cannot be. If you sent these four as they are, four families would know they got a form.

→ Say the last line plainly, without sarcasm at the tool's expense. The room needs to respect the draft to trust the workflow.

SLIDE 20 Lab step 3 · add the one true detail

0:39

MS. RIVERA'S SCREEN · SO FAR Her Friday details: four true sentences from this week, written by her.

→ Six minutes, and protect all six. This is the step the whole session exists for. Circulate and read over shoulders; the failure mode is people writing a second generic sentence. Ask: "could that sentence be about anyone else in your class?"

Step three, six minutes, and this step is the session. One sentence per child, written by you, in the blank. Not typed into the tool. Typed into the note. Think about this week only. What did you see, and when. And apply the swap test before you move on: put another kid's name in that sentence and see if it still works. If it does, you haven't written it yet.

This is also where you'll feel the difference in the work. The first two steps took four minutes and felt like nothing. This one takes six and feels like teaching, because it is teaching. You're doing the noticing. The tool did the typing.

SLIDE 21 Her four sentences

0:41

MS. RIVERA'S SCREEN · SO FAR Her four sentences, on screen: the part the tool could not write.

Here are Ms. Rivera's four, and they took her about ninety seconds because she was looking at this week and not at the whole year. Maya found the mistake in her worked example on Tuesday and said so in front of everyone. Devon read his paragraph out loud on Wednesday, the first time all year. Priya stayed after on Thursday to redo a graph she wasn't happy with, and nobody asked her to. And Jalen set up the lab station for his group on Monday before anyone asked, and ran the timer for all three trials.

Look at Jalen's. Nine days ago his family got a phone call about a shove. This Friday they get a sentence about a kid who set up the lab station. Same teacher, same child, and now his family has heard both. That is the entire argument of this session in one line, and it cost her fifteen seconds of remembering.

SLIDE 22 The finished notes · 1 and 2

0:43

MS. RIVERA'S SCREEN · SO FAR Her notes 1 and 2, as the Okonkwo and Pratt families opened them Friday.

→ Read note 1 aloud, all of it, at the pace a parent would read it. This is the finished product; do not summarize it.

These are the finished notes as the families received them at 3:04 on Friday afternoon. Not a description of them. The actual text. Note one, to Maya's family: "Hi Ms. Okonkwo. Quick note, and nothing is wrong. On Tuesday I put a worked example on the board and made a mistake in it. Maya found the mistake and said so in front of everyone. That takes more nerve at twelve than most adults have. I wanted you to hear it from me. Ms. Rivera, 6th grade science."

Seventy words. The tool wrote the frame around it. She wrote the two sentences in the middle. And that's the note a family keeps.

SLIDE 23 The finished notes · 3 and 4

0:44

MS. RIVERA'S SCREEN · SO FAR Her notes 3 and 4, as the Raman and Brooks families opened them Friday.

Notes three and four, same Friday, same ten minutes. And read note four, to Jalen's family, with the phone call from nine days ago still in your head. "Hi Ms. Brooks. Quick note, and nothing is wrong. On Monday, Jalen had the lab station set up for his whole group before I finished giving directions, and then he ran the timer for all three trials without being asked. His group finished because of him. I wanted you to hear that from me too. Ms. Rivera, 6th grade science."

"Too." That word is doing a lot. That's the whole ten minutes: four families, four true sentences, one of them to a family that had only ever heard bad news. Nothing in there is a technique. It's just contact that happened because the typing stopped being the expensive part.

SLIDE 24 Lab step 4 · the hard message, you write it

0:45

MS. RIVERA'S SCREEN · SO FAR Her hard message: Devon's missing work. She wrote every word of it herself.

→ Five minutes. Be explicit that the tool stays closed for the writing. If someone starts by prompting for a draft, stop them kindly and point at the four rules on slide 10.

Step four, five minutes, and it's the one you've been putting off. The hard message. Write it yourself, by hand or by keyboard, tool closed. Four rules from slide 10: the fact first, one ask with a date, promise nothing you can't deliver, and know when this should have been a phone call. Then, and only then, run the second read for tone. Paste it in, strip the names, ask whether any sentence reads as blame, and take what's useful. The tool does not get to write a sentence of it.

SLIDE 25 Her hard message, word for word

0:48

MS. RIVERA'S SCREEN · SO FAR Her hard message on screen, and the tone read she ran on it after.

Same week, same teacher, and this one goes to Devon's family, the family that got the note about reading his paragraph out loud. Now she has to write about three missing assignments and a quarter that closes in two weeks. Read it on the screen. Fact first, with the three assignments named. One ask: can he stay Thursday, and she names the room and the time she'll be there. Then the sentence I want you to notice most: "I do not know yet whether he can finish all three by the 14th, and I do not want to promise you that he can." She refuses to over-promise in a message where over-promising would have been easy and would have felt kind. And it closes with a phone number and an offer to call back the same day.

Now the contrast, and it's the reason this session is built the way it is. The note on the left took her two minutes and a tool. The message on the right took her twenty minutes and no tool at all. And here's what the left one bought her: when the right one landed in that inbox, it was not the first thing that family had heard from her. It arrived as information, from a teacher who had already shown she was paying attention. That's what the ordinary contact is for. It's not decoration. It's the ground the hard conversation stands on.

→ 45-min cut: read the "I do not want to promise you" line and the contrast paragraph, and skip the rest of the walk-through.

Segment 6 · Making it stick (slides 26–29) · 0:50–0:56

SLIDE 26 What just happened + share-out

0:50

MS. RIVERA'S SCREEN · SO FAR Her ten minutes: four families heard from her when nothing was wrong.

→ *Three voices, one minute each. Prioritize anyone who put their difficult student on the list. 45-min cut: one voice.*

Twenty minutes ago you had four families who hadn't heard from you when nothing was wrong. You now have four notes ready to send and one hard message drafted. Three voices, one minute each, and here's what I want: read me the one true sentence you wrote. Not the whole note. The sentence.

SLIDE 27 Honest limits

0:53

MS. RIVERA'S SCREEN · SO FAR Her honest limit: the tool never met her students. The detail is hers.

Honest limits, as always, so nobody oversells this in the hallway. The tool never met your students, so every sentence worth sending is still yours to write. Volume is not trust: four notes do not repair a relationship, and forty do not either. Consistency does, and the tool lowers the cost of consistency, which is its entire contribution here and is a real one. And the research we leaned on has a boundary: Kraft and Rogers ran in a summer credit-recovery program and tested a bundle, so we can say this is worth doing and we cannot say we know which ingredient did it.

SLIDE 28 Our three commitments

0:54

MS. RIVERA'S SCREEN · SO FAR Her commitments: ten minutes on Friday, the hard message by hand, the red line.

Three commitments, same drill as every kit. One: ten minutes a week, on a day with a name, four families who hear from me when nothing is wrong. Two: I write the hard message myself, and the tool only ever reads it back. Three: no family message goes through a public AI translator, and nothing goes out unread. Can I get a nod on those three?

SLIDE 29 Where this goes

0:55

MS. RIVERA'S SCREEN · SO FAR Her next kit: workload. The rest of the week gets audited.

The month ahead, all inside PLC time you already have: week two, the Friday Ten check, did the ten minutes happen and what came back; week three, the detail round, everyone reads one true sentence they wrote; week four, the hard-message read, bring one you wrote and let a partner check it against the four rules. Then Kit 7, where we go after the workload itself and audit your whole week.

Close (slides 30–32) · 0:56–0:58

SLIDE 30 First 48 hours

0:56

MS. RIVERA'S SCREEN · SO FAR Her 48 hours: send the four, send the hard one, calendar next Friday.

First 48 Hours sheet, three actions. Send the four notes; they're written, they just need a send button. Send the hard message, after you read it out loud once. And two minutes with your calendar: put next week's ten minutes on it, with a day name, and write down the next four families. The habit dies without a day.

SLIDE 31 Exit ticket

0:57

MS. RIVERA'S SCREEN · SO FAR Her exit ticket: four initials, one detail she is proud of, one message dated.

Exit tickets at the door: the four families by initials, the one true detail you're proudest of noticing, and the hard message you drafted with the date it goes out. Those answers set the agenda for the follow-ups, so be specific.

Last word. At the start of this hour I asked you to think about one family and when they last heard from you when nothing was wrong. Most of you found a blank. That blank was never about caring; it was about the fact that four notes used to cost an evening. They cost ten minutes now. The tool bought you the volume. The sentence in the middle of the note is still yours, and so is the hard message, and that's exactly the right way around. Go send the four.
