MISSING A DIRECTION SHOULDN'T MEAN MISSING THE ASSIGNMENT

Executive Functioning Checklists: Self-Advocacy & Planning Pages

Three reusable checklists that connect self-advocacy to the planning skills that make it stick. Built with Deaf and hard-of-hearing (DHH) students in mind — whatever their communication mode — and just as useful for any student who loses track after missing auditory information.

Break it down: task planning checklist

Use this for any multi-step assignment — especially one where directions were mostly spoken. Write in each step as you confirm it, then check it off as you go.

1		☐
2		☐
3		☐
4		☐
5		☐

Not sure you caught every step? That's exactly what the self-check card on page 2 is for.

Materials I need today

- ☐ Assignment or directions, written down (not just remembered from what was said)
- ☐ Notebook, folder, or device for this class
- ☐ Anything due today, ready to turn in
- ☐ My hearing device, remote mic, or other support, if I use one
- ☐ _____ (write in anything specific to this class)

Self-check-in card

A quick three-question check before diving into work — keep it on a desk corner or in a planner. If the answer to any of these is “no” or “not sure,” that’s the moment to use an “I need…” card or ask.

- ☐ Did I understand the directions?
- ☐ Do I need to ask for a repeat, or see it in writing?
- ☐ Do I know what to do first?

Make it stick

- **Cut out the self-check card** and tape it inside a folder, a planner cover, or a desk corner — somewhere it’s seen without being asked for.
- **Photocopy the task-planning page** for reuse; it’s designed to be filled in fresh for a new assignment each time, not a one-time worksheet.
- **Use the same three questions everywhere** — home, resource room, and gen-ed classes — so the habit transfers instead of resetting in every new room.

For the adult in the room: a missed spoken direction doesn’t just cost a DHH student one piece of information — it adds a whole extra planning step: noticing something was missed, deciding whether to ask, and reconstructing the task from a partial picture. That’s real executive-functioning load layered on top of the content itself. These pages exist to make that load visible and shareable, not something the student has to carry silently. This resource is informational; follow your audiologist’s and IEP team’s guidance.
