

EVERY SOURCE VERIFIED AGAINST THE LIVE PUBLICATION BEFORE INCLUSION

References

APA style. The note beneath each entry says exactly where the kit uses it, so any claim can be traced to its source.

- Black, P., & Wiliam, D. (1998). Inside the black box: Raising standards through classroom assessment. *Phi Delta Kappan*, 80(2), 139–148. <https://kappanonline.org/inside-the-black-box-raising-standards-through-classroom-assessment/>
Used for: formative assessment, resting on roughly 250 studies, raises achievement when teachers check understanding and adapt (slide 5; prep guide; handout).
- Elkins, S., et al. (2023). How useful are educational questions generated by large language models? In *Artificial Intelligence in Education (AIED 2023)*. Springer. https://link.springer.com/chapter/10.1007/978-3-031-36336-8_83
Used for: teachers rated LLM-generated questions 97% topic-relevant with usefulness 3.6/4, with teacher vetting integral to the process (slide 12; handout; admin one-pager).
- Gallup, & Walton Family Foundation. (2025). *Teaching for tomorrow*. <https://news.gallup.com/poll/691967/three-teachers-weekly-saving-six-weeks-year.aspx>
Used for: 57% of AI-using teachers say AI improves the quality of their grading and student feedback (slide 17; admin one-pager).
- Hattie, J., & Timperley, H. (2007). The power of feedback. *Review of Educational Research*, 77(1), 81–112. <https://journals.sagepub.com/doi/abs/10.3102/003465430298487>
Used for: feedback averages a 0.79 effect size, among the most powerful influences on achievement, with impact varying widely by how it is given (slide 3; prep guide; admin one-pager).
- Kaliisa, R., Misiejuk, K., López-Pernas, S., & Saqr, M. (2025). How does artificial intelligence compare to human feedback? A meta-analysis. *Educational Psychology*. <https://www.tandfonline.com/doi/full/10.1080/01443410.2025.2553639>
Used for: across 41 studies (4,813 students), no statistically significant difference in learning performance between AI-generated and human feedback; framed alongside Steiss et al. so neither half of the evidence is oversold (slide 13; prep guide FAQ).
- Kaufman, J. H., Woo, A., Eagan, J., Lee, S., & Kassan, E. B. (2025). *Uneven adoption of artificial intelligence tools among U.S. teachers and principals in the 2023–2024 school year* (RR-A134-25). RAND Corporation. https://www.rand.org/pubs/research_reports/RR-A134-25.html
Used for: about one in five teachers used AI to plan instruction at all in 2023–24; among those, about a quarter used it to help assess students, most often building assessments, quizzes, and rubrics, which RAND lists as their second most common use after generating lesson materials (slide 3; prep guide; admin one-pager). Treating assessment drafting as high-leverage work to delegate is AI-Ready School's position, not a RAND finding.
- Merrimack College, & EdWeek Research Center. (2022). How teachers spend their time: A breakdown. *Education Week*. <https://www.edweek.org/teaching-learning/how-teachers-spend-their-time-a-breakdown/2022/04>
Used for: teachers work about 54 hours a week, under half spent directly teaching, with a median 5 hours a week on grading and feedback (slide 2; slide 32; prep guide; admin one-pager).

Panadero, E., Jonsson, A., Pinedo, L., & Fernández-Castilla, B. (2023). Effects of rubrics on academic performance, self-regulated learning, and self-efficacy: A meta-analytic review. *Educational Psychology Review*, 35(4), 113. <https://link.springer.com/article/10.1007/s10648-023-09823-4>

Used for: rubric use has a moderate positive effect on academic performance ($g = 0.45$), with smaller pooled effects on self-regulated learning ($g = 0.23$) and self-efficacy ($g = 0.18$) whose confidence intervals include zero (slide 6; handout; admin one-pager).

Steiss, J., et al. (2024). Comparing the quality of human and ChatGPT feedback of students' writing. *Learning and Instruction*, 91, 101894. <https://www.sciencedirect.com/science/article/pii/S0959475224000215>

Used for: well-trained humans gave higher-quality feedback than ChatGPT on nearly all dimensions; the basis for "AI is the floor, the teacher is the ceiling" (slide 13; handout; prep guide FAQ).

Further reading: five worth your time

- **Black & Wiliam, "Inside the Black Box"** (linked above): still the most readable case for formative assessment; short enough for a PLC to read together.
- **Hattie & Timperley, "The Power of Feedback"** (linked above): the most-cited treatment of what makes feedback land or misfire; worth reading before you draft a single comment starter.
- **Panadero et al.'s rubric meta-analysis** (linked above): for the colleague who suspects rubrics are just paperwork; the evidence says otherwise.
- **Kaliisa et al.'s AI-vs-human feedback meta-analysis** (linked above): the current state of the evidence, useful for anyone who wants the debate firsthand.
- **RAND's adoption report, RR-A134-25** (linked above): for leaders planning rollout; shows where AI use is growing and where it hasn't reached.

Our citation promise: every source in this kit was verified against the live publication, existence and claim, before inclusion. Where full author lists could not be verified, "et al." is used rather than guessed names; conference papers are cited as conference papers. If a link moves, tell us and we'll ship the fix to every member school.

How this kit was made

Every AI-Ready School kit is drafted with AI assistance, the same way we teach educators to use it, then researched, fact-checked, revised, and approved by Adam and Katelyn Spinozzi, certified educators with 20+ combined years in classrooms. Nothing ships without a teacher's judgment on it.
