

Write the days of the month into the empty boxes yourself — a blank grid photocopies cleanly and fits any month's start day.

Year-at-a-glance summary

Carry each month's total here as you go, and set your own target for the year — from your state's requirement, your umbrella school, or your own family's plan.

MY TARGET DAYS (OR HOURS) FOR THIS SCHOOL YEAR

SOURCE OF THAT TARGET

Month	Days present	Running total
1		
2		
3		
4		
5		
6		
7		
8		
9		
10		

Ten rows covers most school-year calendars; add a sticky note for an eleventh or twelfth month if your family schools year-round.

Where you stand against your own target

Divide your running total by your target and match the percentage below — a plain math check, not a rule from any state.

Behind (under 80% of target for time elapsed)

On track (80–100%)

Ahead (over 100%)

Behind isn't an emergency this early in the year — it's a nudge to add a school day or two before the gap grows. Compare the percentage of the year elapsed against the percentage of your target logged, not just the raw numbers.

Simple subject log

One line per week — a quick record of what got covered, useful for a portfolio review or your own peace of mind. Twelve rows covers one grading period; photocopy a fresh page for the next one.

Week of	Subjects covered

Want the AI side of your homeschool planning too? Our Homeschool AI Planning Pack and Full-Year Homeschool Planner with AI build the weekly rhythm and the subject-organized prompts this attendance sheet doesn't cover. In our TpT store.
