

PRINT, CLIP TO A GOAL, START COLLECTING TODAY

Progress Monitoring Tracking Sheets

A twelve-week data sheet and a hand-plotted graph page — the two forms every progress-monitoring system needs, free and ready to print for any goal you're already tracking.

Weekly data sheet — 12 weeks

One row per week. Record the number of trials given, the number correct, and the percentage — then carry the percentage to the graph page.

STUDENT NUMBER		GOAL AREA		CRITERION

Use a student number, never a name, on any copy that leaves your hands for a coach, a substitute, or a shared file.

Graph page

Draw your target line first — a straight line across the row that matches the goal's criterion percentage. Then plot each week's percentage as a dot and connect the dots as you go.

The dashed line prints at 70% as a starting guide — cross it out and redraw it at your own goal's criterion if that number is different.

BEFORE ANY OF THIS GOES INTO A CHATBOT
Student number, goal area, and scores only.
Never a name, never a full roster, never a diagnosis.

Want the roster view, the meeting-prep page, and a drafted progress-report sentence? Our IEP Goal Tracking & Data Collection Sheets pack builds the whole system around these two forms, including an AI page that turns six weeks of de-identified scores into a sentence you can use. Our IEP at a Glance pack builds the one-page student summary every gen-ed teacher and para keeps at hand. Both in our TpT store.
