

EVERY SOURCE VERIFIED AGAINST THE LIVE PUBLICATION BEFORE INCLUSION

References

APA style. The note beneath each entry says exactly where the kit uses it, so any claim can be traced to its source.

- Doss, C. J., et al. (2025). *AI use in schools is quickly increasing but guidance lags behind: Findings from the RAND survey panels* (RR-A4180-1). RAND Corporation. https://www.rand.org/pubs/research_reports/RR-A4180-1.html
Used for: in 2024–25, 53% of ELA/math/science teachers and 54% of their students used AI for school while policy and guidance lagged adoption (prep guide; admin one-pager).
- Lee, V. R., Pope, D., Miles, S., & Zárate, R. C. (2024). Cheating in the age of generative AI: A high school survey study of cheating behaviors before and after the release of ChatGPT. *Computers and Education: Artificial Intelligence*, 7, 100253. <https://www.sciencedirect.com/science/article/pii/S2666920X24000560>
Used for: across three high schools (one public, one private, one charter), anonymous self-reports of at least one dishonest behavior stayed relatively stable at roughly 60–70% before and after ChatGPT's release. The kit states the scope out loud (three schools, self-report, not national or causal) wherever the figure appears (slide 7; handout; prep guide; admin one-pager).
- Liang, W., Yuksekogonul, M., Mao, Y., Wu, E., & Zou, J. (2023). GPT detectors are biased against non-native English writers. *Patterns*, 4(7), 100779. [https://www.cell.com/patterns/fulltext/S2666-3899\(23\)00130-7](https://www.cell.com/patterns/fulltext/S2666-3899(23)00130-7)
Used for: seven commercial GPT detectors were run on 91 TOEFL essays written by non-native English speakers and 88 US eighth-grade essays; the TOEFL essays drew a mean false-positive rate of 61.3% while the US essays were classified near-perfectly (slides 6 and 25; handout; prep guide FAQ; admin one-pager).
- OpenAI. (2023). *New AI classifier for indicating AI-written text* (updated July 20, 2023). <https://openai.com/index/new-ai-classifier-for-indicating-ai-written-text/>
Used for: OpenAI discontinued its own AI-text classifier "due to its low rate of accuracy," having correctly identified 26% of AI-written text and mislabeled human writing as AI 9% of the time (slides 5 and 25; handout; prep guide FAQ; admin one-pager).
- Perkins, M., Furze, L., Roe, J., & MacVaugh, J. (2024). The Artificial Intelligence Assessment Scale (AIAS): A framework for ethical integration of generative AI in educational assessment. *Journal of University Teaching and Learning Practice*, 21(6). <https://doi.org/10.53761/q3azde36>
Used for: prior art credit. Naming the level of AI use permitted on an assessment is an existing, published framework of five levels ("No AI," "AI Planning," "AI Collaboration," "Full AI," "AI Exploration"). This kit teaches a single plain-language line rather than a scale and credits the AIAS wherever level language appears (slide 12; handout; prep guide FAQ). The AIAS itself is released under CC BY-NC-SA 4.0 and is not reproduced here; schools wanting a full scale should adopt it from the source.
- Pew Research Center. (2026, February 24). *How teens use and view AI*. <https://www.pewresearch.org/internet/2026/02/24/how-teens-use-and-view-ai/>
Used for: 54% of U.S. teens say they use AI to help with schoolwork (survey of 1,458 teens, Sept–Oct 2025) (prep guide; admin one-pager).
- Stanford Graduate School of Education. (2023, October 31). *What do AI chatbots really mean for students and cheating?* <https://ed.stanford.edu/news/what-do-ai-chatbots-really-mean-students-and-cheating>
Used for: Denise Pope's account of why students cheat, pointing at pressure, disengagement and workload far more than at access to technology (slide 8; handout; prep guide).

Further reading: five worth your time

- **Liang et al.'s detector-bias study** (linked above): read it before any detector purchase decision. The TOEFL findings end most debates in one page.
- **Lee et al.'s before-and-after cheating study** (linked above): the calm-down paper. Short, readable, and the best antidote to headline panic. Note its own stated limits on sample and self-report.
- **The AI Assessment Scale** (linked above): if your school wants a full five-level framework rather than one line, adopt this one rather than inventing a local version. It has been implemented widely and is translated into many languages.
- **RAND's adoption-vs-guidance report** (linked above): for leaders. It shows exactly why so many students have had no rule explained to them.
- **Pew's teen AI survey** (linked above): the current numbers on what students actually do, useful verbatim at parent nights.

Our citation promise: every source in this kit was verified against the live publication, existence and claim, before inclusion, and every figure ships with the scope of the study that produced it. Where full author lists could not be verified, "et al." is used rather than guessed names. If a link moves, tell us and we'll ship the fix to every member school.

How this kit was made

Every AI-Ready School kit is drafted with AI assistance, the same way we teach educators to use it, then researched, fact-checked, revised, and approved by Adam and Katelyn Spinozzi, certified educators with 20+ combined years in classrooms. Nothing ships without a teacher's judgment on it.

A note on this kit's examples: the two demonstration paragraphs on slide 2 and the sample tool response on slide 21 were written for this session as illustrations, not captured from a live transcript. No student work and no student names appear anywhere in this kit.
