

AGES 9–12 · PLAN IT, PRICE IT, PITCH IT, LAUNCH IT

Launch It

This is the real thing, sized for a 9-to-12-year-old: a one-page business plan, honest market research, pricing with profit math, pitch practice against a tough (but fair) AI customer, and a ledger that shows whether the numbers actually worked. The entrepreneur does every bit of thinking. The grown-up runs the AI — because that's the law of the land until 13 — and manages anything that touches the internet.

THE STANDING RULES

Grown-ups hold the keyboard and run anything online.

Your name, face, school, and street never go into AI tools or onto the internet.

Part 1 · The one-page business plan

Real investors read plans this short. Write yours in pencil — plans change, and that's the point.

Business name

What I sell / do

Who my customer is

The problem I solve for them

Why me (what makes mine better)

My price & why it's fair

My launch goal

GROWN-UP COACH PROMPT · PLAN CHECK

"You are a kind but honest business mentor. I'll read you a [AGE]-year-old's one-page business plan. Point out the two strongest parts, then ask the three questions a real mentor would ask before saying yes. Encouraging tone; real questions."

Part 2 · Market research (ask real humans)

Big companies pay millions for this. You'll do it better: interview 5 people who might actually buy — family, neighbors, co-op friends.

My three interview questions:

Good ones can't be answered "yes/no": "What would make you buy this?" beats "Would you buy this?"

Person	Most interesting thing they said	Would they buy?

What I'm changing because of what I heard:

GROWN-UP COACH PROMPT · SHARPEN THE QUESTIONS

"A [AGE]-year-old is interviewing potential customers about [BUSINESS IDEA]. Improve these three interview questions so they get honest, useful answers instead of polite yeses: [THEIR QUESTIONS]. Explain each fix in one line so the kid learns why."

Part 3 · Price it like a pro

The Rule of Three: supplies + your work + a little extra to grow. Then stress-test it.

One item costs me (supplies)	Pay for my time	Grow-the-business extra	MY PRICE
\$	\$	\$	\$

If I sell 10, I collect \$ _____ , my supplies cost \$ _____ , so my profit is \$ _____

Do this math before launch day. If the profit looks tiny, raise the price a little or find cheaper supplies — that decision is what business IS.

GROWN-UP COACH PROMPT · THE PRICE TEST

"A [AGE]-year-old plans to sell [PRODUCT] for [PRICE], with supplies costing [COST] each. Walk through whether that price is fair using the Rule of Three (supplies + labor + growth), compare to what similar things cost, and show the profit math for 5, 10, and 20 sales. Simple table, kid-clear."

Part 4 · The pitch (and the AI customer)

My 30-second pitch:

Name · what it is · why it's great · the price · how to get one. Write it, then say it to a mirror twice.

GROWN-UP COACH PROMPT · THE PRACTICE CUSTOMER

"Play a curious customer at a kids' market. A [AGE]-year-old will pitch you [PRODUCT]. Respond with one compliment, one real objection ('that seems expensive' / 'I could make that myself'), and one question. Stay friendly — firm enough to be good practice, kind enough for a kid. I'll type their replies; keep the conversation going for three rounds."

Why practice against AI? Because the objection you've already heard can't rattle you. Handling "that's too expensive" out loud — politely, with your Rule-of-Three math — is the single most grown-up business skill on this page.

Part 5 · The ledger (where the truth lives)

Date	What happened (sale, supplies bought...)	Money in	Money out	Running total

After launch: my total profit was \$_____ · keep \$_____ · save \$_____ · reinvest \$_____

The online-safety contract

If any part of this business touches the internet, we agree:

- A grown-up creates and runs any listing, page, or post — and handles every message from strangers.
- My full name, face, school, neighborhood, and schedule stay off the internet, in photos too.
- We never promise delivery to people we don't know in real life without a grown-up's plan.
- Money online (payments, apps) is grown-up territory — I see every number, but the accounts are theirs.
- If anything online feels weird, we stop and talk. The business can wait; this can't.

_____ entrepreneur _____ grown-up partner

Debrief: think like a founder

What surprised me most:

The hardest moment, and what I did:

If I ran it again, version 2.0 would be:

Where this came from: the My First Business workbook (ages 6–10) is the on-ramp to this kit, and our free "Is It True?" lesson teaches the fact-checking these young founders should run on everything — AI included. In our TpT store.
