

8

TRACK A · AI FOUNDATIONS · KIT 8 OF 20 · THE CAPSTONE

Building Your School's AI Culture

Word-for-Word Facilitator Script: read it aloud exactly as written, or make it your own. Keyed to all 35 slides, with stage directions, a running clock, and answers to the questions staff actually ask. Completing Kits 1 through 8 earns each educator the AI-Ready Educator Certificate of Completion.

Facilitator Script · 45–60 minutes

Built by Adam & Katelyn Spinozzi

A husband-and-wife team of certified educators with over 20 combined years in the classroom. Adam is a certified CTE Carpentry teacher; Katelyn is a certified K-8 teacher.

How to use this script

Everything in plain type is meant to be spoken aloud. Read it verbatim (it's written for the ear) or glance and paraphrase once you're comfortable. Either way delivers a complete session. This is the Track A capstone: it assumes Kits 1 through 7 have run, and it spends their accumulated wins. If a kit was skipped, run it first; the capstone can't celebrate what didn't happen.

Meet Ms. Rivera. Throughout the deck you'll see the same example teacher's screen: Ms. Rivera, our running composite (not a real person; she appears in every kit). When her screen is up, point the room at it; it's the model to mimic in the lab. If someone asks who she is, say exactly that: a fictional teacher we use across the series so you always see what the work looks like before you try it yourself. Her tracker chip sits top-right on every slide; the matching line under each slide cue below tells you what it says, so you always know what the room is reading.

THE STANCE OF THIS WHOLE SESSION

Culture is what keeps working when the PD ends. Norms in writing, a sharing routine on the calendar, skeptics respected, every new hire covered.

Timing checkpoints

Clock	You should be...	If behind...
0:12	On the staff doc (slide 9)	Trim discussion on slides 5–7
0:24	On measuring without surveillance (slide 14)	Never trim slides 13–14 or 16; trim slide 15 instead
0:30	Starting the lab (slide 18)	Start it anyway; the lab is the session
0:54	On First 48 Hours (slide 33)	Hold the closing lines; hand out sheets at the door

45-minute version: run two triage calls on slide 12 instead of four, compress lab steps 3 and 4 into one 5-minute block, take two share-out voices, and read the "45-min cut" stage notes where they appear.

From the founders

→ This note is from Adam and Katelyn Spinozzi, the two certified teachers who wrote this kit. It's here to give you their perspective before you present. Sharing it is entirely your call: read parts aloud where they fit, retell them in your own words, or keep it to yourself as background. The session is complete either way.

We're Adam and Katelyn, and here is why this session matters for what happens in your classrooms: everything the last seven kits built is still fragile. Habits that live in individual teachers leave when teachers leave, fade when Octobers get hard, and never reach the hire who starts in January. The research on professional learning is clear about what makes it stick: sustained duration, collaboration, and time to practice together. Culture is the difference between a school that did some AI training once and a school where safe, skilled, human-centered practice is simply how the building works.

The lessons we believe this hour will leave with your staff: that norms written down and posted beat rules remembered; that a five-minute sharing routine keeps eight weeks of skills alive better than any refresher course; that skeptics, respected and recruited, are a culture's quality control; and that the certificate your staff earn today marks a beginning, not a finish line. The tools will keep changing. A culture that knows its rules, shares its wins, and protects its human core will be ready for every version of this technology that arrives after we're all done predicting it.

Segment 1 · Welcome & what eight weeks built (slides 1–4)

SLIDE 1 Title

0:00

→ Slide 1 up as people arrive. Start on time. This one deserves a little ceremony; it's the capstone.

Welcome to the last session of the core eight. Eight weeks ago this faculty started with one hard rule and a hands-on lab. Today we do the thing most PD never does: make it permanent. Not with more techniques, but with culture: the norms, routines, and plans that keep everything working when the series ends, when the tools change, and when new colleagues walk in the door knowing none of it. By the end of this hour, your school's AI culture will be drafted, calendared, and owned. And there's a certificate involved.

SLIDE 2 The inventory of eight weeks

0:02

MS. RIVERA'S SCREEN · SO FAR Her eight weeks: rules, formula, artifacts, boxes, batches, templates. All real.

Look at what actually exists now that didn't in week one. The One Hard Rule, known cold by everyone in this room. A prompt formula and a staff library full of working templates. Differentiated materials and vetted assessments built for real lessons. Lane labels and expectation boxes on real assignments. Positive notes landing in family inboxes weekly. Two deleted repeaters per person and a protected list in ink. That's not a training record; that's a changed building. Today we make sure it stays changed.

SLIDE 3 The fade risk

0:04

MS. RIVERA'S SCREEN · SO FAR Her risk, named: PD fades unless it becomes routine. Culture is the fix.

Now the honest threat. Across thirty-five rigorous studies, the professional learning that actually sticks shares the same features: sustained duration, collaboration, active learning, time to reflect. Our read of that, and I'll say it as ours: take those away and training fades. Not because teachers don't care, but because October always comes. And the wider landscape says the expectations often never get written down. RAND found that in 2025, 45 percent of principals reported any school or district guidance on AI, while 53 percent of teachers and 54 percent of students were already using it. Thirty-four states and Puerto Rico have state-level guidance; your building is a different question. You are one faculty meeting away from being the exception, and this is that meeting.

SLIDE 4 Agenda + one promise

0:05

MS. RIVERA'S SCREEN · SO FAR Her goal: norms drafted, a sharing routine calendared, every future hire covered.

The hour: what a culture actually is, in testable terms. Then the three load-bearing pieces: written norms, a sharing routine, and the plan for skeptics and new hires. Then the lab, and it's different today: instead of building classroom artifacts, this faculty drafts its own five norms, picks its sharing routine and puts it on a real calendar, and plans onboarding for every future colleague. That's the promise: you leave with the culture drafted, not described. And when the exit tickets are in, Track A is complete, and so is the certificate.

Segment 2 · What culture means (slides 5–8)

SLIDE 5 The culture test

0:06

MS. RIVERA'S SCREEN · SO FAR Her culture test: would a new hire learn the rules by watching, not by asking?

Here's the testable definition of culture: what a new hire learns by watching, before anyone tells them anything. If a colleague who joined tomorrow would see prompts shared openly, drafts reviewed before they ship, lane labels on assignments, and nobody pasting student names into a chatbot, you have a culture. If they'd have to be told, you have a policy. Policies inform; cultures train. Everything today aims at the watching version.

SLIDE 6 The five norms

0:08

MS. RIVERA'S SCREEN · SO FAR Her five norms, drafted: privacy, review, honesty, sharing, the protected list.

A culture needs its rules short enough to live on one page. Five norms, each one earned by a kit you've already run. Privacy: no student information in public tools, ever. Review: nothing AI-drafted reaches a student or family unread. Honesty: we say what we use, to students and to families, and lanes are labeled. Sharing: working prompts go in the library; nobody solves twice. And the protected list: the relational work stays human, by decision. Your faculty will draft its own wording in the lab, but these five jobs need doing in any wording. One page, posted, signed. That's the constitution.

SLIDE 7 The sharing routine

0:10

MS. RIVERA'S SCREEN · SO FAR Her sharing routine: five minutes, every PLC: one win, one fail, one steal.

The second load-bearing piece is a routine, because norms without a rhythm are posters. The proven shape is five minutes inside a meeting that already exists: one win, one failure, one steal. A win: something AI-drafted that worked. A failure, and this is the important one: something it got wrong, shared without embarrassment, because a culture that laughs about hallucinated citations is a culture that catches them. And a steal: one template someone's taking from the library this week. Five minutes. The whole apparatus of eight kits, kept alive by five minutes.

SLIDE 8 The banner

0:11

MS. RIVERA'S SCREEN · SO FAR Her banner: a tool becomes culture when nobody has to remember to use it.

The banner over today: a tool becomes culture when nobody has to remember to use it. Calendars remember. Routines remember. Posted norms remember. People, in October, do not. Everything in the lab is about moving the remembering out of heads and into systems.

Segment 3 · The artifacts of culture (slides 9–12)

SLIDE 9 The staff doc, grown up

0:12

Here's the culture artifact that matters most, on Ms. Rivera's screen: the staff doc, eight weeks in. Look at the sections: Prompting, with the templates from Kit 2. Assessment, from Kit 4. Communication, from Kit 6. Workload, from Kit 7, already the biggest. Names on every entry. Thirty-one templates, twenty-two contributors. Read that second number again: twenty-two people teaching each other. That document is the culture, visible. When it grows weekly, the culture is alive; when it stalls for a month, that's your early-warning light, and the fix is one good five-minute sharing round.

SLIDE 10 Norms on one page

0:15

MS. RIVERA'S SCREEN · SO FAR Her norms, posted: five lines on one page, signed by the faculty.

The norms document, and the format matters: one page, five lines, plain words, signed. Not a binder; binders are where norms go to be forgotten. Ms. Rivera's faculty wrote theirs in the wording that sounds like their building and posted it in the workroom, and every teacher signed it, the way you sign something you mean. When leadership later builds formal policy, this page is its seed, and Kit 15 turns it into policy properly. Until then, this IS the school's stance, and it's a real one.

SLIDE 11 The calendar

0:17

MS. RIVERA'S SCREEN · SO FAR Her calendar: monthly refreshers, Kit 1 for every new hire, norms revisited each semester.

Third artifact: the calendar. Culture needs dates, or it needs willpower, and dates are cheaper. The rhythm that works: the five-minute sharing round in every PLC or every other one. One kit refresher a month next semester, ten minutes each, using the 30-day plans you already own. Kit 1 for every new hire in their first month, run by any confident colleague. And the norms page revisited once a semester, because a stance that can't be revised becomes a relic. None of this is new meeting time; it's minutes inside meetings that already exist.

SLIDE 12 Practice: culture triage

0:19

MS. RIVERA'S SCREEN · SO FAR Her triage eye: healthy culture shares failures; drifting culture hides use.

→ *Interactive. Read each scenario, let the room call healthy or drifting, confirm with the answer strip at the bottom of the slide. 45-min cut: scenarios 1 and 3.*

Quick practice: healthy or drifting? One: a teacher tells the whole PLC about the quiz question the AI got confidently wrong, and everyone laughs and checks their own. (Healthy; failure shared is quality control.) Two: a teacher quietly stops mentioning they use AI because a colleague rolled their eyes. (Drifting; use going underground is the first warning light.) Three: a new hire asks which chatbot the school uses and gets three confident, identical answers about the rules. (Healthy; that's the watching test passed.) Four: the staff doc hasn't gained an entry since September. (Drifting; the early-warning light. The fix is one sharing round, not a lecture.)

Segment 4 · Sustaining it (slides 13–17)

SLIDE 13 Every new hire, covered

0:21

MS. RIVERA'S SCREEN · SO FAR Her onboarding plan: every new hire runs Kit 1 in their first month.

The culture's biggest leak is the January hire who never saw week one. The fix is already on your shelf: Kit 1 is self-contained and any confident colleague can run it for one person or five. The norm: every new hire experiences Kit 1 in their first month, gets the norms page in their welcome folder, and gets a library tour from a colleague. Thirty minutes of onboarding, and the culture stops depending on who was here in the fall.

SLIDE 14 Measuring without surveillance

0:23

MS. RIVERA'S SCREEN · SO FAR Her measures: artifacts, not surveillance. Library growth, stories, exit tickets.

How do you know it's working without turning into the AI police? You count artifacts, never people. The library's growth. The exit tickets you already collect. The stories that surface in sharing rounds. Lane labels visible on assignments. What you never do is audit individual teachers' AI use, because surveillance kills the openness that makes the culture safe, and Kit 5 taught the whole building what happens when policing replaces clarity. Leadership: healthy cultures measure the garden, not the gardeners.

SLIDE 15 When the tools change

0:26

MS. RIVERA'S SCREEN · SO FAR Her tool-churn insurance: habits that survive any vendor: rules, formula, review.

One reassurance, because somebody is wondering: every tool named in any headline will change. Interfaces, vendors, capabilities, all of it. Notice what this series never depended on: a specific product. The rules, the formula, the review habit, the lanes, the protected list: all of it transfers to whatever arrives next. That's not an accident; it's the design. Cultures outlive tools. That's the whole reason to build one.

SLIDE 16 The never list

0:27

MS. RIVERA'S SCREEN · SO FAR Her never list: no policy lag, no mocked skeptics, no finish line.

The never list, capstone edition. Never let the written stance lag what staff actually do; revisit it each semester so paper and practice match. Never mock the skeptics: they are your quality control, your drift detectors, and the reason the review rule stays honest; recruit them, name their value out loud. And never treat today as a finish line: the certificate marks eight kits lived, not a subject completed. The schools that get this right stay students of it.

SLIDE 17 The certificate

0:29

MS. RIVERA'S SCREEN · SO FAR Her certificate: all eight kits, lived. The AI-Ready Educator Certificate of Completion.

And the milestone: with today's exit ticket, everyone who's completed all eight sessions has earned the AI-Ready Educator Certificate of Completion. It documents something real: eight hours of hands-on professional learning, artifacts built for real classrooms every single week, and a set of commitments this faculty made out loud and kept. Check with your district or state about whether it qualifies for local PD credit; the exit tickets you've turned in all along are the documentation. Be proud of this one. Most buildings talked about AI this year. Yours trained.

Segment 5 · The lab: draft the culture (slides 18–28)

SLIDE 18 Lab setup

0:30

MS. RIVERA'S SCREEN · SO FAR Her lab pick, one page all the way through: her school's culture page.

→ *Dark slide. This lab is discussion and drafting; devices optional, chart paper or a shared doc works. Groups of 3–4 rather than pairs. The blank page template is the next slide; Ms. Rivera's culture page appears large on every step slide, and her finished page is on slides 26 and 27. Point lost groups at whichever is up.*

Last lab of the series, twenty minutes, and today we build the school, not a classroom artifact. Four steps: draft our five norms in our own words. Pick the sharing routine and put it on the actual calendar. Plan onboarding and name our skeptic-partners. And set next semester's rhythm. Groups of three or four. Ms. Rivera builds one artifact all the way through this lab: her school's culture page, a single page that picks up a section at every step. Her page will be on screen the whole time, so if you ever feel lost, copy her structure and swap in this building's words. What you draft today goes to the whole faculty this week, so write like it's real, because it is. Go.

SLIDE 19 The culture page, blank

0:31

MS. RIVERA'S SCREEN · SO FAR Her page, still blank: the same four blocks every school fills in.

→ Hold this up for thirty seconds before step 1 starts. Point at each block as you name it; the handout carries the same blanks, so groups can draft straight onto it.

Here is the page itself, blank, and it's the same template in every school that runs this kit: five norms, one sentence each. A sharing routine with a rhythm, a date, and an owner. Onboarding and skeptic partners. And a five-line strip for next semester. Four blocks, four steps, in that order. When we stop in twenty minutes, your group is holding a finished page, not a pile of notes, and the words in every blank are this building's.

SLIDE 20 Lab step 1: the five norms

0:32

MS. RIVERA'S SCREEN · SO FAR Her culture page, step 1: the five norms, in her building's words.

→ 7 minutes. Circulate. Push for the building's own words, not policy-speak; the five jobs are on the handout.

Step one, seven minutes: the five norms, in this faculty's voice. The five jobs are fixed: privacy, review, honesty, sharing, the protected list. The wording is yours. "We never put a student into a chatbot" beats any compliance sentence ever written. One line each. If your group finishes early, argue about the wording; that argument is the culture forming.

SLIDE 21 The prompt she types to merge the drafts

0:35

→ Her full chat window is the slide, so the tracker chip steps aside here. Put it up while groups are still drafting; talk over it for a minute, then let them work.

While you draft, look at what happens after tonight, because somebody has to merge four groups' drafts into one page this week. Here is Ms. Rivera doing exactly that, and it's the same four parts you learned in Kit 2: role in teal, task in navy, context in amber, format in green. Compare it to the "before" line at the top. "Write our school some AI norms" gets you a stranger's policy in a stranger's voice. Now look at what the context does, because it's the part people skip: forty-two teachers will sign this page, we say kids and not learners, keep all five jobs, and do not soften the privacy line. That one sentence is why her merged page still sounds like her building. Whoever owns the merge here can copy this shape tonight.

SLIDE 22 Her follow-ups: what she typed next

0:37

→ Her chat thread is the slide, so no tracker chip here either. Read the right-hand column aloud; that column is the payoff.

Iteration isn't failure; it's the work. Four follow-ups, one chat, nothing re-pasted, and each one fills one block of the page. Norms: rewrite norm one the way a teacher would say it out loud, no "shall," no "personally identifiable." It came back as "we never put a student into a chatbot," which two groups had already written that way. Routine: add the sharing routine as one line, with blanks for the date and the owner, and a good idea became a line with a name on it. Onboarding: two lines, who runs Kit 1 for a new hire and who our skeptic partners are, and suddenly the January hire is covered on paper. Semester: a five-line strip, January through May, all of it drawn from 30-day plans she already owns. That whole thread took about six minutes, which is roughly what you're spending right now.

SLIDE 23 Lab step 2: the routine, calendared

0:39

MS. RIVERA'S SCREEN · SO FAR Her culture page, step 2: win-fail-steal calendared, round one owned.

→ 4 minutes. The routine only counts when it has a date and an owner.

Step two, four minutes: pick the sharing routine and calendar it for real. Win-fail-steal in every PLC, or every other; a monthly ten-minute version at staff meetings; whatever rhythm this building will actually keep. It counts when it has a date and a name attached: who runs the first one, and when. Write both down.

SLIDE 24 Lab step 3: onboarding + skeptic partners

0:43

MS. RIVERA'S SCREEN · SO FAR Her culture page, step 3: a Kit 1 owner named; skeptics recruited as reviewers.

→ 4 minutes. 45-min cut: fold this into step 4's block.

Step three, four minutes, two small plans. Onboarding: who runs Kit 1 for new hires, and what goes in the welcome folder (the norms page and a library tour). And skeptic partners: name the colleagues whose doubts keep us honest, and give them a real role: reviewers, drift-spotters, the people we ask "what's wrong with this?" On purpose, with respect, out loud.

SLIDE 25 Lab step 4: next semester's rhythm

0:47

MS. RIVERA'S SCREEN · SO FAR Her culture page, step 4: the semester strip, months and kit numbers written in.

→ 4 minutes. The 30-day plans from Kits 1–7 are the refresher material; nothing new to write.

Last step, four minutes: next semester on one line per month. One ten-minute kit refresher a month, drawn from the 30-day plans you already own. The norms page revisited in the first month back. New-hire Kit 1 as needed. Write the months and the kit numbers. That single strip of calendar is what makes today permanent.

SLIDE 26 Her culture page, word for word

0:50

MS. RIVERA'S SCREEN · SO FAR Her culture page, finished: five norms in her faculty's words, signed.

→ *Hold this up while the last groups finish their strip. Read norm one and norm five aloud; don't paraphrase them, the wording is the whole point.*

Here is the part we usually never show you: the finished thing itself, word for word, not a description of it. "Privacy. We never put a student's name, work, or personal information into a public AI tool. When we need help with student work, we describe the situation instead." And the last one: "The protected list. Some work stays human by decision: the hard conversation, the note after a loss, the recommendation letter. We keep that list, and we keep it short." Five sentences. No "shall," no "stakeholders," nothing a teacher wouldn't say in a hallway, and the privacy line did not get softened in the merge. Signed by the faculty, posted in the workroom, revisited every semester. That is what your page looks like next week.

SLIDE 27 The other half of her page

0:51

MS. RIVERA'S SCREEN · SO FAR Her page's other half: the routine dated, the owners named, the semester set.

→ *Point at the date and the owner rather than reading the whole strip. Those two details are what separate a real page from a nice one.*

And the rest of her page, also word for word. The routine: five minutes at every other PLC, one win, one fail, one steal. Round one, Tuesday the first, 7:35 in the morning, owned by Ms. Rivera, and every round names who runs the next one. Onboarding: every new colleague runs Kit 1 in month one with the PLC lead, and the welcome folder holds this page and a library tour. Skeptic partners: two named colleagues who read first and say what's wrong. Then the semester strip: norms revisited in January, then one ten-minute refresher a month, February through May. That is fifty minutes across a semester, and all of it comes out of 30-day plans you already own. A date, an owner, and a name in every blank: that's what a school actually adopts.

SLIDE 28 Share-out

0:51

MS. RIVERA'S SCREEN · SO FAR Her share-out: her culture page's privacy norm, read aloud.

→ *4 voices, one minute each: one norm in your group's wording. 45-min cut: two voices. The facilitator collects all drafts; merging happens this week.*

Four voices: read us one norm in your group's wording. Listen for the lines that sound like this building; those survive the merge. All drafts come to me at the door, and the merged page goes to the whole faculty this week for the signing.

Segment 6 · Making it stick (slides 29–32)

SLIDE 29 What you just built

0:52

MS. RIVERA'S SCREEN · SO FAR Her inventory, one culture page: norms, routine, onboarding, semester strip.

The inventory, and it's a different kind than the last seven: five norms in this faculty's own words. A sharing routine with a date and an owner. An onboarding plan that covers every future colleague. A semester calendar that costs minutes. Eight weeks ago you built your first prompt. Today you built the thing that keeps all of it alive.

SLIDE 30 Honest limits

0:53

MS. RIVERA'S SCREEN · SO FAR Her honest limits: a document isn't a culture; consistency is. Leadership carries it.

Honest limits, one last time, because this series has never oversold and won't start now. A signed page is not a culture; consistency is, and consistency is carried disproportionately by leadership: protecting the five minutes, honoring the no-refill promise from Kit 7, revisiting the norms when they drift. Culture is slow; it will wobble in October and need the routine most exactly when the routine is easiest to skip. And nothing here is finished: tools will change, students will surprise us, and the stance will need revising. That's not failure. That's what a living culture does.

SLIDE 31 Our three commitments

0:54

MS. RIVERA'S SCREEN · SO FAR Her commitments: run the routine, onboard every hire, revisit the norms.

The final three commitments of the series. One: the sharing routine runs, starting this month, five minutes, protected. Two: every new hire gets Kit 1, the norms page, and a library tour in their first month. Three: we revisit the norms every semester so the paper always matches the practice. Can I get one last nod on those three?

SLIDE 32 Where this goes

0:55

MS. RIVERA'S SCREEN · SO FAR Her next: Tracks B-D as they release; the culture makes them land.

And where it goes from here: Track A is complete, and the library keeps growing. Track B goes subject by subject: ELA, math, science, early elementary, students with diverse needs. Track C equips leadership: policy, rollout, family communication at the school level. Track D goes deeper for renewal years. Kits release into your membership as they're finished, and the culture you drafted today is exactly what makes each one land in a week instead of a semester. The engine is built. Everything after this is fuel.

Close (slides 33–35)

SLIDE 33 First 48 hours

0:55

MS. RIVERA'S SCREEN · SO FAR Her 48 hours: norms to the faculty, routine on the calendar, certificate celebrated.

The last First 48 Hours sheet, and it's the facilitator's plus everyone's: the merged norms page goes out to the faculty for signing. The first sharing round lands on the real calendar with a named owner. And the certificate completion gets celebrated out loud: staff meeting, newsletter, the way this building celebrates real things. Eight weeks of work deserves a moment. Take it.

SLIDE 34 Exit ticket

0:56

MS. RIVERA'S SCREEN · SO FAR Her exit ticket: her favorite norm, her routine date, one worry.

The last exit ticket of Track A: your favorite norm from today's drafts, the date of the first sharing round, and the one thing you're still worried about, honestly. The worries steer what leadership protects first. And with the ticket in the box, Track A is documented, complete.

SLIDE 35 Close

0:57

Last words of the series. Eight weeks ago, AI was a headline and a hallway worry. Today it's a set of rules everyone knows, a library everyone feeds, hours coming back every week, and a culture with your faculty's own words on the wall. The tools will keep changing. What you built here doesn't depend on them. Human teaching, life-changing tools, in that order, permanently. Congratulations to every educator in this room: you're AI-ready, and it's on paper. Thanks for all eight hours. Go sign your norms page.
