

ANTECEDENT · BEHAVIOR · CONSEQUENCE, RECORDED THE WAY THE FIELD RECORDS IT

ABC Behavior Data Sheets

A recording form, a frequency tally, a duration sheet, and a weekly pattern summary for describing a behavior before a team decides what to do about it — plus the one page nothing else in this price range offers: an AI page that turns a week of de-identified entries into a plain-language pattern summary, using a student number only, never a name.

- **ABC recording form** — three columns, several incidents per page.
- **Frequency tally** — count how often a behavior happens across a day or a week.
- **Duration sheet** — start time, stop time, and the total for a behavior that lasts rather than one that just happens.
- **Weekly pattern summary** — pull a week of entries together and look for what repeats.
- **"What the data suggests we try next" table** — the zero-technology half, printed right on the page.
- **The AI Pattern Summary page** — the differentiator.
- **What this pack is not** — and where the official process still happens.

BEFORE YOU USE ANY PAGE IN THIS PACK

This is a **recording tool**, never a decision-maker.

It never names a disorder, never diagnoses, and never drafts a behavior plan as though it were the team's decision. You record and summarize; the team decides.

Before you start: what "ABC" means

ABC stands for **antecedent, behavior, consequence** — what happened right before a behavior, what the behavior actually was, and what happened right after it. It is the standard structure behavior analysts and special educators use to describe an incident before a team decides what, if anything, to do about it (Cooper, Heron, & Heward, *Applied Behavior Analysis*, Pearson). Write down what you saw and heard, plainly and without judgment — "raised his voice and left his seat," not "was defiant." A description a colleague could picture without having been in the room is the goal on every line.

ABC recording form

One row per incident. Use a student number, never a name, on any copy that leaves your hands for a coach, a substitute, or a shared file.

STUDENT NUMBER

CLASS / SETTING

WEEK OF

Date / time	Antecedent — what happened right before	Behavior — exactly what you saw and heard	Consequence — what happened right after
-------------	---	---	---

Frequency tally

Pick one specific behavior to count this week and make one tally mark each time it happens — useful on its own, or alongside the ABC form for a behavior that happens often enough that a full sentence every time isn't realistic.

BEHAVIOR COUNTED THIS WEEK

Day	Morning	Midday	Afternoon	Total	Note
-----	---------	--------	-----------	-------	------

Mon

Tue

Wed

Thu

Fri

Duration sheet

For a behavior that lasts — a meltdown, time out of the room, an extended refusal — rather than one that happens and is over. Record the start and stop time for each episode; the sheet totals the day for you.

Date	Start time	Stop time	Duration	Day's total

Weekly pattern summary

At the end of the week, look back over your ABC entries and pull out what repeated — a pattern is more useful to a team than any single incident.

ANTECEDENT THAT CAME UP MOST OFTEN

CONSEQUENCE THAT CAME UP MOST OFTEN

TIME OF DAY IT HAPPENED MOST

SETTING IT HAPPENED MOST

What the data suggests we try next: the zero-technology check

No chart, no AI, no login — match what you're seeing in the pattern summary to the row below for one reasonable next step to bring to the team.

What the pattern shows	What it usually means	A reasonable next step
Same antecedent almost every time (a transition, a specific task, a specific peer)	Something about that trigger is hard for this student right now	Bring the pattern to the team; consider a support built around that specific moment
Same consequence almost every time (adult attention, escape from a task, peer reaction)	That outcome may be what the behavior is achieving for the student	Discuss with the team whether the same outcome could be reached a different way
Clustered at one time of day	A schedule, fatigue, or hunger factor may be involved	Check what else is happening around that time before changing anything else
No clear pattern across several weeks of entries	More data, or a different lens, may be needed	Keep recording and loop in the team rather than guessing at a cause

The AI Pattern Summary page

Turn a week of de-identified ABC entries into a plain-language pattern summary. Use a student number only. Never paste a name, a class roster, or a diagnosis.

Worked example — Student #22, five ABC entries this week: (1) transition to math, called out, teacher redirected; (2) transition to math, left seat, sent to hallway; (3) independent reading, quiet, no incident; (4) transition to math, called out, peers laughed; (5) transition to lunch, no incident.

Pattern: three of five entries cluster around the transition into math.

What this is not: not a diagnosis, not a claim about why math specifically is hard, and not a behavior plan — those stay the team's call once more data or a formal assessment is in.

Copy-paste prompt: this week's entries in one paragraph

"Here are this week's ABC (antecedent-behavior-consequence) entries for one student, by student number only: [PASTE THE ANTECEDENT, BEHAVIOR, AND CONSEQUENCE FROM EACH ROW — NO NAME, NO CLASS ROSTER, NO DIAGNOSIS]. In plain language, describe any pattern across the antecedents and any pattern across the consequences. Do not suggest a cause, a diagnosis, or a behavior plan — describe only what the data shows."

The chatbot describes a pattern from entries you already wrote. Whether that pattern means anything, and what to do about it, stay the team's decisions — every time, for every student.

What this pack is not

- **Not a functional behavior assessment (FBA).** A full FBA follows your district's official process and is typically conducted or overseen by a qualified professional; these sheets are the informal, day-to-day recording that can feed into one.
- **Not a behavior intervention plan (BIP).** This pack describes; it never prescribes what to do about a behavior.
- **Not a diagnosis.** It never names or implies a disorder.

Filing this pack

- **File by student number** in a locked cabinet or a password-protected folder, matching your district's storage policy for behavior records.
- **Shred or securely delete** working sheets once they've served their purpose, per your district's retention schedule.

Tracking a weekly behavior check instead of an incident-by-incident pattern? Our Free Behavior Tracker builds the daily point sheet and weekly summary. Our IEP Goal Tracking & Data Collection Sheets pack builds the same AI-page approach for an IEP goal. Both in our TpT store.
