

THREE ACTIONS · EACH UNDER 15 MINUTES · WITHIN TWO DAYS

Run the templates. Bank the hour.

PD that isn't used within two days mostly evaporates. Each action below cashes something you built in the lab. Do all three, check the boxes, done.

ACTION 1 Run template #1 for real ~10 min

The next real instance of your worst repeater gets done with the template, not from scratch. Review the output like the professional you are, fix what wobbles, and fold the fix back into the template so it's permanent.

☐ Ran it · The task: _____

ACTION 2 Run (or build) template #2 ~10 min

If you built both in the lab, run the second on its real task. If you were on the 45-minute version, build it now with the recipe: write once, bracket the changes, test twice. Then post both to the staff doc's Workload section.

☐ Both templates live · Posted to the staff doc: _____

ACTION 3 Spend the first minutes on purpose ~15 min

Put the first recovered minutes where you said they'd go: the planning you enjoy, the student who needs ten minutes, leaving on time. Then notice you did it. The noticing is what keeps the hour from evaporating back into the pile.

☐ The hour went to: _____

THE STANCE, POCKET-SIZED
Repetitive to the tool. Relational on purpose.
Review everything. The protected list is law.

Stuck? The template recipe and the sub-plan worked example are on the handout, copy-ready. Start with Action 1; it pays immediately.
